

E-Mail to Fax

I have setup e-mail to fax so you can send out a document as an email and the system will fax it out the format to do this is

fax"the number you are faxing to"@titaniumvfax.com

so if I was sending a fax to your fax number (803112222) this is what it would look like

fax803112222@titaniumvfax.com

if you were sending a fax to my office (8033500505) this is what it would look like

fax8033500505@titaniumvfax.com

You would send the PDF document as an email and it would be delivered to the fax number in the email

Call me if you have any questions
